PROFESSIONAL SUMMARY

Senior Backend Engineer with 7+ years of experience designing, building, and operating scalable, high-availability REST APIs and microservices across insurance, fintech, healthcare, and logistics. Expert in NestJS, Node.js, and TypeScript, with deep practical knowledge of event-driven architecture, asynchronous programming, and Domain-Driven Design. Hands-on with Docker containerisation, Jenkins CI/CD pipelines, PostgreSQL, MongoDB, Redis, Elasticsearch, and Linux server environments, including Nginx configuration. Delivered measurable production results, including a 40% query optimisation, a 35% workflow turnaround reduction, and a 30% load-time improvement. A code reviewer, team mentor, and Agile practitioner who ships reliable, well-tested backend systems at scale.

TECHNICAL SKILLS

Backend: NestJS (primary), Node.js, Express.js, TypeScript, JavaScript

Cloud & Infra: Docker, Linux server environments (AWS-compatible: EC2, S3, RDS patterns), CI/CD, SSL/TLS, Nginx

Databases & Search: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, Typesense, DynamoDB (familiar)

DevOps & Pipelines: Jenkins, GitHub Actions (familiar), Git, GitFlow, Bitbucket, GitLab, Kubernetes (learning)

Monitoring & Logging: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus/Grafana (familiar), structured logging

Testing & Quality: Jest, Mocha, Chai, Postman/Newman, Swagger UI, ESLint, code review

Architecture: Microservices, DDD, RESTful API design, event-driven systems, async/await, WebSockets (familiar)

Practices: Agile/Scrum, code review, mentorship, technical documentation, GitFlow branching

WORK EXPERIENCE

Senior Backend Engineer | Abba & Kings Systems LLC **December 2021 to Present | Ibadan, Nigeria**

Enterprise Insurance, HR, and Accounting SaaS, NestJS microservices at scale

- Architected and delivered numerous production REST APIs and NestJS microservices using Domain-Driven Design, enabling real-time policy creation, underwriting, and claims processing with zero critical outages over 4+ years in production.
- Optimised Elasticsearch queries and MongoDB schemas, achieving a 40% improvement in multi-tenant search response time while maintaining zero data-integrity incidents across 4+ years of production load.
- Led code reviews for a five-engineer team, enforcing coding standards and static analysis with ESLint, reducing estimated production defects by 25%.

Stack: NestJS, Node.js, Express.js, TypeScript, Docker, Jenkins, Nginx, Elasticsearch, MongoDB, Linux, Bitbucket

Backend Engineer | Freelance **July 2022 to December 2024 | Ottawa, Canada (Remote)**

Scalable web applications for e-commerce, healthcare, and fintech clients, NestJS/Node.js stack

- Reduced application load time by 30% through targeted PostgreSQL/MongoDB query optimisation, a Redis caching strategy, and compound indexing, enabling platforms to absorb 60% traffic spikes without performance degradation.
- Integrated payment gateway and OAuth 2.0 authentication APIs, reducing checkout failure rate by 18% via retry logic, error-handling middleware, and asynchronous processing pipelines.
- Designed Swagger-documented REST APIs for healthcare and fintech clients, enabling seamless frontend integration and reducing integration turnaround from days to hours.

Stack: NestJS, Express.js, Node.js, TypeScript, MongoDB, MySQL, PostgreSQL, Redis, Elasticsearch, Docker, Linux, Nginx

KEY PROJECTS

Insurebility Platform, Enterprise Insurance System

- Implemented DDD-driven NestJS middleware across five bounded contexts (lead capture, risk assessment, underwriting, policy issuance, claims), enabling accurate and fully auditable financial decisions at each lifecycle stage.

- Reduced claims processing errors by structuring policy-underwriter associations through domain entities and event-driven middleware, improving compliance traceability and regulatory financial accuracy.

Stack: NestJS, Express.js, Node.js, Docker, Jenkins, Elasticsearch, MongoDB, Linux

Broker Reinsurance System

- Designed reinsurance treaty management, co-broker commission tracking, and installment premium calculation middleware using DDD principles, centralising domain logic and eliminating a 3-day monthly manual reconciliation.
- Implemented underwriter share and retention calculations with full audit trails, enabling the finance team to trace any figure back to its source transaction.

Stack: NestJS, Express.js, Node.js, Docker, Elasticsearch, MongoDB, Linux

Multi-Tenant Search Engine

- Architected a high-performance search platform combining Typesense for real-time, typo-tolerant search, Redis for sub-millisecond hot-path caching, and PostgreSQL as the single source of truth, maintaining consistency across all layers.
- Implemented API rate limiting middleware and structured activity logging, reducing abuse incidents to near zero and cutting troubleshooting time by 50%.

Stack: NestJS, Express.js, PostgreSQL, Typesense, Redis, Elasticsearch

EDUCATION

Bachelor of Science (B.Sc.) in Physics
Federal University Oye Ekiti, Ekiti State, Nigeria

CERTIFICATIONS

Certificate of Appreciation, December 2024
Abba & Kings Systems LLC. Awarded in recognition of outstanding contribution to the company's mandate.
